

# Visibility Enum

Use the `Cache.Visibility` enumeration in the `Cache.Session` or `Cache.Org` methods to indicate whether a cached value is visible only in the value's namespace or in all namespaces.

## Enum Values

The following are the values of the `Cache.Visibility` enum.

Value	Description
ALL	The cached value is available to Apex code executing from any namespace. This is the default state.
NAMESPACE	<p>The cached value is available to Apex code executing from the same namespace.</p> <p>If a key has the <code>Visibility.NAMESPACE</code> attribute, a <code>get</code> method initiated from a different namespace returns <code>null</code>.</p>
