

# CommerceStorePricing Class

Get product prices.

## Namespace

ConnectApi

## CommerceStorePricing Methods

These methods are for `CommerceStorePricing`. All methods are static.

- [getProductPrice\(webstoreId, productId, effectiveAccountId\)](#)  
Get the list and buyer price for a product.
- [getProductPrice\(webstoreId, productId, effectiveAccountId, productSellingModelIds\)](#)  
Get a product's list and buyer price for specified product selling models.
- [getProductPrices\(webstoreId, effectiveAccountId, pricingInput\)](#)  
Get the prices for multiple products.

### getProductPrice(webstoreId, productId, effectiveAccountId)

Get the list and buyer price for a product.

#### API Version

49.0

#### Available to Guest Users

51.0

#### Requires Chatter

No

#### Signature

```
public static ConnectApi.ProductPrice getProductPrice(String webstoreId, String productId, String effectiveAccountId)
```

#### Parameters

##### *webstoreId*

Type: [String](#)

ID of the webstore.

##### *productId*

Type: [String](#)

ID of the product.

##### *effectiveAccountId*

Type: [String](#)

### Usage

This method respects buyer entitlements and only users entitled to view product and price data can access it.

If a store is segmented into markets, this API looks at the language parameter appended to the URL to determine the shopper's locale and returns the appropriate values.

## **getProductPrice(webstoreId, productId, effectiveAccountId, productSellingModelIds)**

Get a product's list and buyer price for specified product selling models.

### API Version

56.0

### Available to Guest Users

56.0

### Requires Chatter

No

### Signature

```
public static ConnectApi.ProductPrice getProductPrice(String webstoreId, String productId,
String effectiveAccountId, List<String> productSellingModelIds)
```

### Parameters

#### ***webstoreId***

Type: [String](#)

ID of the webstore.

#### ***productId***

Type: [String](#)

ID of the product.

#### ***effectiveAccountId***

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made.

#### ***productSellingModelIds***

Type: [List<String>](#)

List of product selling model IDs for the product.

### Return Value

Type: [ConnectApi.ProductPrice](#)

## **getProductPrices(webstoreId, effectiveAccountId, pricingInput)**

Get the prices for multiple products.

### API Version

**Requires Chatter**

No

**Signature**

```
public static ConnectApi.PricingResult getProductPrices(String webstoreId, String effectiveAccountId, ConnectApi.PricingInput pricingInput)
```

**Parameters**

***webstoreId***

Type: [String](#)

ID of the webstore.

***effectiveAccountId***

Type: [String](#)

ID of the buyer account or guest buyer profile for which the request is made. If `null`, the default value is determined from context.

***pricingInput***

Type: [ConnectApi.PricingInput](#)

A `ConnectApi.PricingInput` body with the list of line items to price.

**Return Value**

Type: [ConnectApi.PricingResult](#)

**Usage**

This method respects buyer entitlements and only users entitled to view product and price data can access it.

If a store is segmented into markets, this API looks at the language parameter appended to the URL to determine the shopper's locale and returns the appropriate values.
