QueueableContext Interface ☰

Apex Reference Guide / **System Namespace** / OrgLimits Class

QueueableContext Interface

Represents the parameter type of the `execute()` method in a class that implements the `Queueable` interface and contains the job ID. This interface is implemented internally by Apex.

Namespace

System

QueueableContext Methods

The following are methods for `QueueableContext`.

- **getJobId()**
  Returns the ID of the submitted job that uses the `Queueable` interface.

getJobId()

Returns the ID of the submitted job that uses the `Queueable` interface.

Signature

```
public ID getJobId()
```

Return Value

Type: ID

The ID of the submitted job.
