Compression Namespace ☰

Apex Reference Guide / Compression Namespace

Compression Namespace

The Compression namespace provides classes and methods to create and extract zip files.

The following are the classes and enums in the `Compression` namespace.

- **Level Enum**
  Specifies the compression level for creating a zip file.

- **Method Enum**
  Specifies the compression method for the zip entries.

- **ZipEntry Class**
  Contains methods to get and set information about a zip file entry.

- **ZipReader Class**
  Contains methods to get information about zip entries and to extract content for specified zip entries from the zip file.

- **ZipWriter Class**
  Contains methods to add zip entries, generate a zipped archive, and return the result as an Apex blob.

- **Compression Exceptions**
  The `Compression` namespace contains exception classes.
