Developers

DomainType Enum

DomainType Enum

Specifies the domain type for a System.Domain.

Usage

Use the `DomainType` enum to obtain the type of a domain parsed through the System.DomainParser class.

Enum Values

The following are the values of the `System.DomainType` enum. These values only apply to Salesforce-hosted domains.

Value	Description
CMS_DOMAIN	Content Management System (CMS) public channel domains.
CONTENT_DOMAIN	Domains that serve content (files) stored in Salesforce.
CUSTOMER_360_ADMIN_DOMAIN	Customer 360 Data Manager domains.
CUSTOMER_360_DOMAIN	Customer 360 Data Manager Admin domains.
EXPERIENCE_CLOUD_SITES_BUILDER_DOMAIN	Experience Builder for Experience Cloud sites domains.
EXPERIENCE_CLOUD_SITES_DOMAIN	Salesforce-hosted domains that serve Experience Cloud sites.
EXPERIENCE_CLOUD_SITES_LIVE_PREVIEW_DOMAIN	Experience Builder Live Preview domains.
EXPERIENCE_CLOUD_SITES_PREVIEW_DOMAIN	Experience Builder Preview domains.
LIGHTNING_CONTAINER_COMPONENT_DOMAIN	Lightning Container Component domains.
LIGHTNING_DOMAIN	Domains that serve Lighting pages.
ORG_MY_DOMAIN	My Domain login domains.
SALESFORCE_SITES_DOMAIN	Salesforce-hosted domains that serve Salesforce Sites.
SETUP_DOMAIN	The Salesforce-hosted domain that serves Setup pages.
VISUALFORCE_DOMAIN	Domains that serve Visualforce pages.
