OrgLimits Class   ☰

OrgLimits Class

Contains methods that provide a list or map of all OrgLimit instances for Salesforce your org, such as SOAP API requests, Bulk API requests, and Streaming API limits.

Namespace

System

Usage

Use the and methods to obtain either a list or a map of all your org limits. To get details on each limit, use instance methods from `.System.OrgLimits` `getAll` `getMap` `System.OrgLimit`

For comparison, the Limits Class returns Apex governor limits and not Salesforce API limits.

> ℹ **Note**
>
> Limit values are updated asynchronously, in near-real-time.
