ConnectApi.AssociatedActionsCa

A list of action link groups to associate with a feed element. To associate an action link feed element, the call must be made from the Apex namespace that created the actio definition. In addition, the user making the call must have created the definition or hav Data permission.

An action link is a button on a feed element. Clicking an action link can take a user to initiate a file download, or invoke an API call to Salesforce or to an external server. An a includes a URL and an HTTP method, and can include a request body and header info such as an OAuth token for authentication. Use action links to integrate Salesforce and services into the feed so that users can drive productivity and accelerate innovation.

Property	Type	Description	Required or Optional
`actionLink GroupIds`	List<String>	The action link group IDs to associate with the feed element. Associate one `Primary` and up to 10 total action link groups to a feed item. Action link groups are returned in the order specified in this property. An action link group ID is returned from a call to `ConnectApi.ActionLinks.createActionLinkGroupDefinition(communityId, actionLinkGroup)`.	Required
