ConnectApi.CartEvaluateTaxInput

Shipping address and custom fields used to calculate taxes for a cart.

Property	Type	Description
customFields	List< SObject >	Array of sObjects and custom fields for the sObjects. Standard fields are ignored. The custom fields must already be defined for the sObject. Currently, the WebCart, CartItem, and CartDeliveryGroup sObjects are supported. Field-level security rules from the shopper profile are applied to the custom fields. The rules are applied for registered shoppers and for the guest shopper profile. See Create a Cart and Cart Item with Custom Fields in a Commerce Store.
shippingAddress	ConnectApi.CartShippingAddressInputRepresentation	Shipping address for a cart.
