Knowledge Class   ☰

Apex Reference Guide / **ConnectApi Namespace** / Knowledge Class

Knowledge Class

Get information about trending articles in Experience Cloud sites.

Namespace

ConnectApi

Knowledge Methods

These methods are for `Knowledge`. All methods are static.

- **getTopViewedArticlesForTopic(communityId, topicId, maxResults)**
  Get the top viewed articles for a topic.

- **getTrendingArticles(communityId, maxResults)**
  Get trending articles for an Experience Cloud site.

- **getTrendingArticlesForTopic(communityId, topicId, maxResults)**
  Get the trending articles for a topic in an Experience Cloud site.

getTopViewedArticlesForTopic(communityId, topicId, maxResults)

Get the top viewed articles for a topic.

API Version

41.0

Available to Guest Users

41.0

Requires Chatter

No

Signature

```
public static ConnectApi.KnowledgeArticleVersionCollection getTopViewedArticlesForTopic(String
communityId, String topicId, Integer maxResults)
```

Parameters

communityId
  Type: String

  ID for an Experience Cloud site, `internal`, or `null`.

topicId
  Type: String

  ID of the topic.

maxResults
  Type: Integer

Type: `ConnectApi.KnowledgeArticleVersionCollection`

getTrendingArticles(communityId, maxResults)

Get trending articles for an Experience Cloud site.

API Version

36.0

Available to Guest Users

36.0

Requires Chatter

No

Signature

```
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticles(String
communityId, Integer maxResults)
```

Parameters

communityId

Type: String

ID for an Experience Cloud site, `internal`, or `null`.

maxResults

Type: Integer

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value

Type: `ConnectApi.KnowledgeArticleVersionCollection`

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

getTrendingArticlesForTopic(communityId, topicId, maxResults)

Get the trending articles for a topic in an Experience Cloud site.

API Version

36.0

Available to Guest Users

36.0

```
public static ConnectApi.KnowledgeArticleVersionCollection getTrendingArticlesForTopic(String
communityId, String topicId, Integer maxResults)
```

Parameters

communityId

Type: String

ID for an Experience Cloud site, `internal`, or `null`.

topicId

Type: String

ID of the topic.

maxResults

Type: Integer

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

Return Value

Type: ConnectApi.KnowledgeArticleVersionCollection

Usage

To test code that uses this method, use the matching set test method (prefix the method name with `setTest`). Use the set test method with the same parameters or the code throws an exception.

Knowledge Test Methods

These test methods are for `Knowledge`. All methods are static.

For information about using these methods to test your `ConnectApi` code, see Testing ConnectApi Code.

setTestGetTrendingArticles(communityId, maxResults, result)

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticles` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

```
public static Void setTestGetTrendingArticles(String communityId, Integer maxResults,
ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

communityId

Type: String

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

result

Type: ConnectApi.KnowledgeArticleVersionCollection

Object containing test data.

Return Value

Type: Void

See Also

- getTrendingArticles(communityId, maxResults)

setTestGetTrendingArticlesForTopic(communityId, topicId, maxResults, result)

Register a `ConnectApi.KnowledgeVersionArticleCollection` object to be returned when the matching `ConnectApi.getTrendingArticlesForTopic` method is called in a test context. Use the method with the same parameters or you receive an exception.

API Version

36.0

Signature

```
public static Void setTestGetTrendingArticlesForTopic(String communityId, String topicId,
Integer maxResults, ConnectApi.KnowledgeArticleVersionCollection result)
```

Parameters

communityId

Type: String

ID for an Experience Cloud site, `internal`, or `null`.

topicId

Type: String

ID of the topic.

maxResults

Type: Integer

The maximum number of articles returned. Values can be from 0 to 25. Default is 5.

result

Type: ConnectApi.KnowledgeArticleVersionCollection

Object containing test data.

Return Value

Type: Void

See Also

- getTrendingArticlesForTopic(communityId, topicId, maxResults)
