PostAuthorizationRequest Class ☰

PostAuthorizationRequest Class

Sends information about a postauthorization request to a gateway adapter during a service call.

Namespace

CommercePayments

Usage

This class extends `BaseRequest` and contains information about a transaction postauthorization request. The gateway adapter reads fields from this class to validate the client-side transaction with the payment gateway. An object of this class is available by calling `getPaymentRequest()` in the PaymentGatewayContext Class).

```
((commercepayments.PostAuthorizationRequest)gatewayContext.getPaymentRequest());
```

- **PostAuthorizationRequest Constructors**
  Lists the constructors for postauthorization requests.

- **PostAuthorizationRequest Properties**
  Lists properties for a postauthorizaiton request.
